Ch. 10 Gases Continued

List some characteristics of gases

- highly compressible
- expand to fill their containers
- have extremely low densities

* 2 or more gaves
form homogenous
mixture.

What are the 4 variables needed to define the physical state of a gas?

- Temperature

- Amount of gas

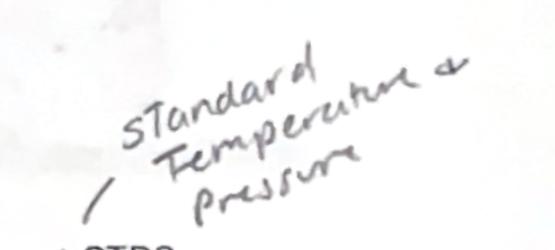

What are the units for standard atmospheric pressure?

Convert 0.836 atm to torr

$$\frac{\text{Nunt}}{\text{nave}}$$
 0.836 atm . $\frac{760 \text{ forr}}{1 \text{ atm}}$ $\frac{35.36}{1 \text{ atm}}$ $\frac{635 \text{ forr}}{1 \text{ atm}}$

Convert 172.8 kPa to torr

What is the Ideal-Gas Equation?

What is the volume of one mole of ideal gas at STP?

22.4L

A sealed container has a gas pressure of **1.8 atm** at a temperature of **15°C**. If the container is heated to **200°C**, what is the new pressure? Assume the volume and amount of gas remain constant.

$$P_1 = 1.8 \text{ atm}$$
 $T_1 = 15^{\circ}C + 173.15 = 100^{\circ}C + 273.15 = 100^{\circ}C + 273.15$

Gray-lussais
$$\frac{P_1}{T_1} = \frac{P_2}{T_2}$$

Equation $T_1 = \frac{P_2}{T_2}$
 $P_2 = \frac{P_1 T_2}{T_1} \rightarrow \frac{(1.8 \text{ atm})(473.15)}{(288.15)} = \boxed{2.95 \text{ atm}}$

A 0.75 mol sample of gas is at 20°C and 1.5 atm. The volume is reduced to one-third of its original volume, and the final pressure is 3.6 atm. What is the final temperature of the gas in °C?

$$n = .75 \text{ mol}$$
 $T_1 = 20.0 ^{\circ} \text{C}$
 $P_1 = 1.5 \text{ atm}$
 $V_2 = \frac{1}{3} V_1 \Rightarrow V_2 = \frac{3.6 \text{ atm}}{2}$

Combined Gas Law
$$T_1 = \frac{r_2 \, v_2}{T_2}$$

$$T_2 = \frac{r_2 \, v_2 \, T_1}{r_2} = \frac{(3.6 \, \text{atm}) \, (\frac{1}{3} \, \text{y/s}) \, (293.15 \, \text{k})}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s}} = \frac{(3.6 \, \text{atm}) \, \text{y/s}}{(1.5 \, \text{atm}) \, \text{y/s$$

Magnesium carbonate is heated and decomposes to produce CO₂ gas, which is collected in a 500. mL container. The collected gas exerts a pressure of 2.8 atm at a temperature of 27°C.

How many moles of CO2 were produced?

$$V = 500. \text{ mL}$$
 $P = 2.8 \text{ atm}$
 $T = 27°C$
 $N = 7$

$$n = \frac{PV}{RT}$$
=\frac{(2.8 \text{ atm})(0.5)}{(0.0821 \text{ atm})(300.15)}
=\frac{(0.0821 \text{ atm})(300.15)}{(0.057 \text{ mol } CO_2)}
